DETAILED ACTION

Page 2

1. Claims 1-15 have been examined.

Claim Objections

- 2. Claims 1-2,5-6,8,14-15 are objected to because of the following informalities:

 Only one period at the end of the claim is needed. Appropriate correction is required.
- 3. Claims 5, 9-11,15 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim, the claims are not properly written.

 Appropriate correction is required. See MPEP § 608.01(n). Accordingly, the claims 5,9-11,15 not been further treated on the merits.
- 4. Claim 3 is objected to because of the following informalities: In claim limitation line 1 "imbedded information" should change to embedded information. Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2136

6. Regarding claims 1-2,6,14 the phrase "for example" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

- 7. Claims 1-15 are recites the limitation "the imager housing.... the host device.... the data..... the 2d imager......the ID...." in claim 1. There is insufficient antecedent basis for this limitation in the claim. Appropriate correction is required.
- 8. Claims 4,7,8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The terms "what ever duration of time", "in many Ids today", "it is always on" makes the claim indefinite. Appropriate correction is required.
- 9. Claims 1-15 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Claim Rejections - 35 USC § 102

10. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/809,325 Page 4

Art Unit: 2136

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 11. Claims 1-4,6-8,12-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Brundage et al (hereinafter referred as Brundage) US 2007/0016790 A1.
- 12. As per claim 1: Brundage discloses a method of validation of a Drivers License, Identification card, liquor ID, Government ID, Corporate ID, or any ID that has information embedded on it. Where a UV LED board will light up any hidden security feature embedded in any of the ID mentioned above. Where within the imager housing is firmware with a command that can be sent to it by the host devise to turn on the UV LEDS for any duration of time set forth by the host devise software application. The data being sent to the host devise to turn on the UV LEDS can be sent by the 2d Imager, magnetic card reader, smart card reader or keyed entry (See 0233-0234,0245 and Figs 4,5 and abstract).
- 13. As per claim 2: Brundage discloses a method wherein reading the embedded information on an ID with a 2D Imager, magnetic strip reader, smart card reader or keyed entry. The information to be displayed on the host terminal with any or all-pertinent information embedded within the ID. Example of pertinent information "Age, Town, State, expiration, date of issue, height, weight, hair color, sex, eye color, drivers classification, name, address (See Fig 4).

Art Unit: 2136

- 14. As per claim 3: Brundage discloses a method wherein not only reading the ID imbedded information but a method of illuminating the Hidden UV security if the ID has one (See 0233 and Fig 4).
- 15. As per claim 4: Brundage discloses a method wherein after the imager has read the data and the host devise is sending the signal back to the 2d imager to turn on the the UV LED board for what ever duration of time set forth in the software application (See Fig 3A).
- 16. As per claim 6: Brundage discloses a method of validating an ID described in claim 1, by adding a command that can be sent from the host devise to the UV2D imager to turn on its UV LED board. License Jurisdiction is an example of a trigger that will send the command to turn on the UV LEDS. Dates of issue in conjunction with Jurisdiction can also be used as the trigger to send the command to signal the UV2D imager to turn on the UVLEDS. Any pertinent information within the ID can be used as the trigger for the command to be sent (See 0233,0245 and Figs 4,5)
- 17. As per claim 7: Brundage discloses a method of claim 1, in validating an Id where in using an 8x loupe or greater to read the micro printing that is embedded in many IDs today (See 0233,0245 and Figs 4,5).
- 18. As per claim 8: Brundage discloses a method of claim 1, with an 2D imager that has a UV board connected to it and has a firmware command that can be sent back to the 2D imager by a host devise to turn on that UV led board for what ever duration of time set forth in the software application. The UV board can also be set so it is always on (See 0233,0245 and Figs 4,5).

Art Unit: 2136

19. As per claim 12: Brundage discloses a method wherein the display screen of the

Page 6

host devise will also tell the end user to "CHECK UV SECURITY" (See 0233-0234,0245

and Figs 4,5)

20. As per claim 13: Brundage discloses a method wherein the host devise is

capable after information sent to it by the UV2D reader, mag strip reader or smart card

reader to calculate a person's age and transmit any pertinent information on the ID to

the display screen of the host terminal (See 0233,0245 and Figs 4,5).

21. As per claim 14: Brundage discloses a method of validating a ID described in

claim 1, a license for example is placed on the 2D Imagers lip and the reader is set in

presentation mode which enables it to only turn on when it see a code or better yet a

number of edges to tell the Imager to trip and read the code that has been presented to

it. Then is sent to the host devise where it is interpreted and the data is displayed on the

host display screen with whatever pertinent information the end user wants to display. If

the data being read matches the data that has been set up in storage of the host devise

to trigger the signal then the UV LED board will turn on (See 0233,0245 and Figs 4,5).

Conclusion

22. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO 892.

23. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Fikremariam Yalew whose telephone number is

5712723852. The examiner can normally be reached on 9-5.

Art Unit: 2136

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Moazzami Nasser can be reached on 571-272-4195. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
